

# NGSSC CFD Course Part 2

## Compressible Fluid Flow

Uppsala University, 18-22 August 2003

### Contents Module

## V. Methods for Euler and Navier-Stokes Equations

by Bernhard Müller

1. Cell-Centered Finite Volume Method	3
1.1. Integral Form of 2D Navier-Stokes Equations	3
1.2. Cell-Centered Finite Volume Method	6
1.3. Computation of Flux Balance	10
1.4. Approximation of Derivatives	12

2. Computation of Shock Waves	15
2.1. Riemann Solvers	17
2.2. Roe's Approximate Riemann Solver	20
2.3. Total Variation Diminishing Schemes	28
2.4. Multidimensional Application	33
2.5. Numerical Dissipation	36
2.6. Boundary Conditions	39
2.6.1. Solid Wall	39
2.6.2. Inflow and Outflow	43

3. Time Discretization	44
3.1. Explicit Runge-Kutta Methods	46
3.2. Implicit Linear Multistep Methods	53
3.3. Time Derivative Preconditioning	58
3.4. Perturbation Formulation	63

4. Finite Volume Methods on Structured and Unstructured Grids	65
4.1. Structured Finite Volume Method	65
4.1.1. Metric Terms	67
4.1.2. Numerical Fluxes	69
4.2. Unstructured Finite Volume Method	72
4.2.1. Edge-Based Data Structure	77
4.2.2. Metric Terms	80
4.2.3. Numerical Fluxes	84
