

Part 1 - notes from the decision letter

What the presentation should include

- A popular scientific presentation of your project proposal (research and innovation programs)
- A description of how the research is linked to the international research front
- A description what you want to accomplish with your money
- Your own plan for the future, i.e., how the project will affect your future as a researcher at LTU

- 1) The personal description of the report and what emerges from interviews with and presentation of the researcher. A focused and coherent presentation and discussion is considered positive

Assessment perspectives - 2

2) The integration with the six qualifying requirements already assessed in the proposal:

Relevance - a: how the research will contribute concretely to the development of Norrbotten. Especially interesting is any of:

- Sustainable Municipal Infrastructure and citizens security
- the priority focus areas of innovation strategy for Norrbotten County in 2013 - 2020
- E-health and health economics

Relevance - b: how the research will specifically help to strengthen LTU's strength and areas of innovation through collaboration and / or strengthen the established environment

Assessment perspectives - 3

Quality: international publication and citation, demonstrated ability to independently fund research, interpersonal skills internally at the university and externally, experience in building groups such as via PhD supervision

Feasibility and exploitability: A three-year research and innovation programs including a plan for collaboration with relevant stakeholders

Innovation: The innovation in research and innovation program

“Good qualities”: The simplicity and clarity of the project application

Assessment perspectives - summary

(Note: they are personal interpretations!)

- Is the project:
 - benefiting Norrbotten and LTU?
 - linked with the research front?
 - feasible?
 - exploitable?
 - innovative?
 - clear?
 - attracting funds and generating publications?
- how do you want to spend the money?
- how do you want to collaborate with stakeholders?
- what are the expected results and impacts?

Assessment perspectives - summary

(Note: they are personal interpretations!)

- Is the project:
 - benefiting Norrbotten and LTU?
 - linked with the research front?
 - feasible?
 - exploitable?
 - innovative?
 - clear?
 - attracting funds and generating publications?
- how do you want to spend the money?
- how do you want to collaborate with stakeholders?
- what are the expected results and impacts?

Question: am I missing something?
