

Opening the Doors for Women in the Chemical Sciences and Engineering: Why We Need Keys to the Doors

Madeleine Jacobs

American Chemical Society

Women chemists and chemical engineers have made substantial progress in moving up the career ladder in academia, industry, and government, but there is still a glass ceiling. The situation in many parts of academia is especially troublesome, because women populate the pipeline in increasingly large numbers. If the pipeline is robust, where are the leaks? Industry has its own set of challenges. The speaker will present data and discuss the challenges for chemical scientists and engineers in the new millennium.
